Summary

Full-Stack Developer (Next.js · TypeScript · Node.js · Express.js · PostgreSQL) seeking SDE internship. Shipped and architected end-to-end applications — a multi-tenant B2B inventory platform with a custom Node/Express/Prisma backend and real-time sync, and a collaborative team-workspace platform built on a layered Express + PostgreSQL architecture. Comfortable owning both the client and the server: schema design, REST API layers, auth systems, and production deployment.

Technical Skills

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL
- **Frontend:** Next.js, React.js, Tailwind CSS, Redux Toolkit, TanStack Query, Framer Motion, Vite
- **Backend:** Node.js, Express.js, REST API Design, JWT Authentication, Redis, WebSocket (Socket.IO), Layered Architecture (Controller-Service-Repository)
- **Databases:** PostgreSQL, Prisma ORM, Supabase, MongoDB
- **AI & Tools:** LLM API Integration, Prompt Engineering, Git, GitHub, Vercel, Render, Postman, ESLint

Projects

Nexus — Engineering Collaboration & Project Intelligence Platform nexus-team-snowy-three.vercel.app

Next.js · TypeScript · Node.js · Express · Prisma · PostgreSQL · Socket.IO

- Implemented multi-tenant workspace architecture with RBAC to isolate organizations and control resource permissions.
- Built real-time collaboration using WebSockets, synchronizing task, comment and notification events across users.
- Integrated Groq AI LLM to automate task breakdown, project summarization, and automated risk analysis from free-text engineering prompts.
- Integrated AI workflows for task generation, project summarization and risk analysis, Optimized PostgreSQL queries and API responses using indexing, pagination and caching.

BizLink — B2B Inventory Sync Platform

bizlink-two.vercel.app

Next.js · TypeScript · Node.js · Express · Prisma · PostgreSQL · Socket.IO

- Architected a production-grade multi-tenant B2B platform end-to-end: designed the PostgreSQL schema, built the REST API layer in Node.js, implemented the Next.js frontend, and deployed to Vercel — sole developer, zero team dependency.
- Replaced polling-based inventory updates with PostgreSQL Realtime WebSocket subscriptions, delivering sub-second (<1s) live inventory sync across wholesaler and retailer accounts and eliminating reconciliation delays entirely.
- Enforced multi-tenant data isolation using Supabase RLS policies scoped per account UUID — each tenant's inventory records inaccessible to others at the database layer, requiring zero application-level access control logic.
- Designed a normalized PostgreSQL schema with role-based access patterns supporting 2 distinct account types (wholesaler/retailer) with independent data views, permissioning, and audit trails for each tenant.

Education

Lovely Professional University

Bachelor of Computer Applications (BCA)

Relevant Coursework: Data Structures & Algorithms, Web Technologies, Database Management Systems, Artificial Intelligence

Punjab, India

June 2025 – June 2028
